

BOSTOCAP

Bottle Stoppers & Capsules

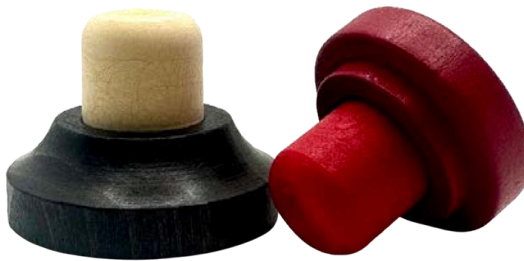

Stoppers
Wood Head

For more info: www.bostocap.com

COLOURS

Depending on your needs we can provide you with off the shelf standard varnishes (Natural, Dark Brown, Black etc) in some cases we have stock or match a colour you want to achieve (Red, Blue, Silver, Gold, Copper...) and even add a shiny lacquer effect. Keep in mind MOQ of 10K for bespoke colours.

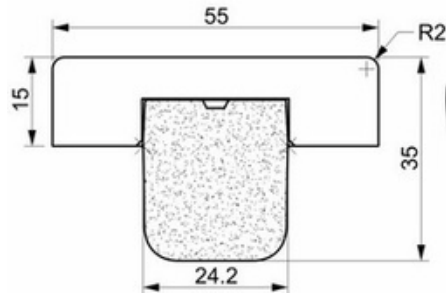

Wood absorbs colour thus sampling can be requested in order to have a perfect fit. Lead time +/- 10 weeks.

SIZE & SHAPE

Each bottle can have a unique wood head size. There are standard sizes 34x12 or 29x12 for which we might have stock, but you are free to choose the size or shape you want to achieve. If needed there would be a small tooling charge +/-400 EUR.

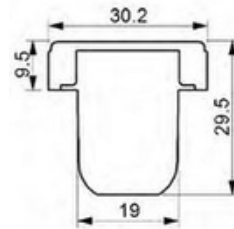

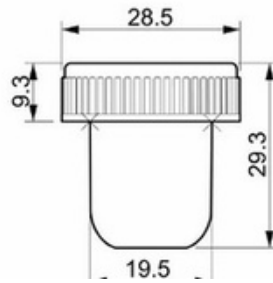

Stoppers
Plastic Head

COLOURS

For plastic heads the standard colours is Black, White, Silver etc but we can of course personalise colours to match a specific request.

There are standard sizes for which we have injection moulds. We do bespoke development but due to the cavities MOQ are much more important than for Wood.

TAMPOGRAPHY

This is also referred to as Pad printing or tampo printing, it's an indirect offset (gravure) printing process where logo is stamped onto the head. You can pretty much print very small details. This requires a small tooling cost of +/-200 EUR.

EMBOSS

Emboss or Deboss, both options are possible, but we mainly use embossed for plastic heads (high relief). Tooling cost required depending on volume/molds.

WEIGHT OF PLASTIC

There are multiple plastic materials to consider (Bakelite) but also weight. When you look at the stopper upside down you can see if the plastic head is full or empty (see photo). This has impact on weight. One of the advantages is the lower lead times

CO- INJECTED

With synthetic shanks you can have co-injected option instead of glued. This means that the different polymers are injected into the same mold.

HIGH DENSITY and RESINE

Depending on your wishes these are materials that can be used to lower the tooling cost but to give a premium feel to your stopper.

SYNTHETIC
MONO
SHANK

This stopper is moulded into one piece of thermoplastic material. Available in Black and Beige. This is a stock item that readily available in most sizes. Bottle testing is required to see if side channel is needed to reduce pop up effect.

PHALANGE

This cylindrical closure that is shaped as a phalange can be produced in natural or synthetic cork. This is a made in one piece and gives it an authentic and original look to your bottle.

Stoppers
Aluminium Head

COLOURS

Standard colours exist, gold, silver, black but can also do bespoke option red, copper. Most projects we do are with synthetic shanks.

Stoppers
Cork Type

CORK

You have chosen the type of head you wanted to work with, now you can choose the type of shank you want to have. Most combinations are possible, but each project will have its requirements and thus should be considered as unique.

Stoppers Glass

GLASS

if you want to get an ultra-premium result then glass head is an option to consider. You can play with colours if you want. We can work with standard shapes or develop a mould that can be handmade or industrially. Tooling cost will depend on the volume you are looking at.

PREMIUM

As a brand you want your bottle to stand out from the rest and for the consumer when opening your bottle, to hold in the hand, whilst pouring a drink, a heavy and expensive feeling stopper. This can be achieved taking into account your budget, the overall volume needed, type of material to be used.

Zamak, Ceramic, Metal, etc.
Type of branding to be applied.
We can help you achieve this!

Capsules Tin

TOP BRANDING

Highly malleable material that adapts to bottles of all shapes and sizes.

There are various thicknesses available.

Tin capsules add a superior finish to your product, offering a premium tactile exterior.

Specific equipment required when bottling. All types of customisation of the capsules with a logo and/or a brand is possible.

Depending on the level of detail on your logo that you want to achieve we will either propose embossing or tampography printing for the top disk.

SIDE BRANDING

We can only propose print on the side of the capsule.

OPENING

We have developed a specific opening to remove paper cut.

Capsules Polylaminate

Polylaminate capsules are made with a proprietary three-layer structure of aluminium/polyethylene/aluminium laminated to form a soft tin-like capsule. Unlimited colours, shades and size available.

SIDE BRANDING

Various print options are possible.

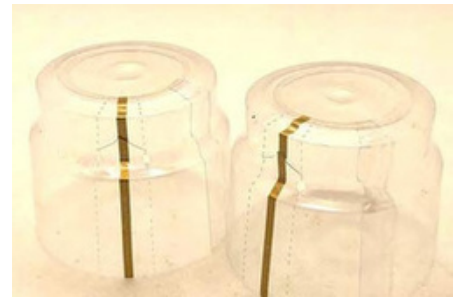

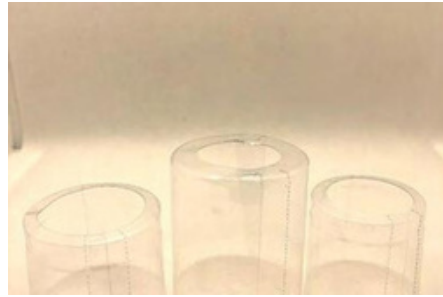

Capsules Thermo Shrinkable

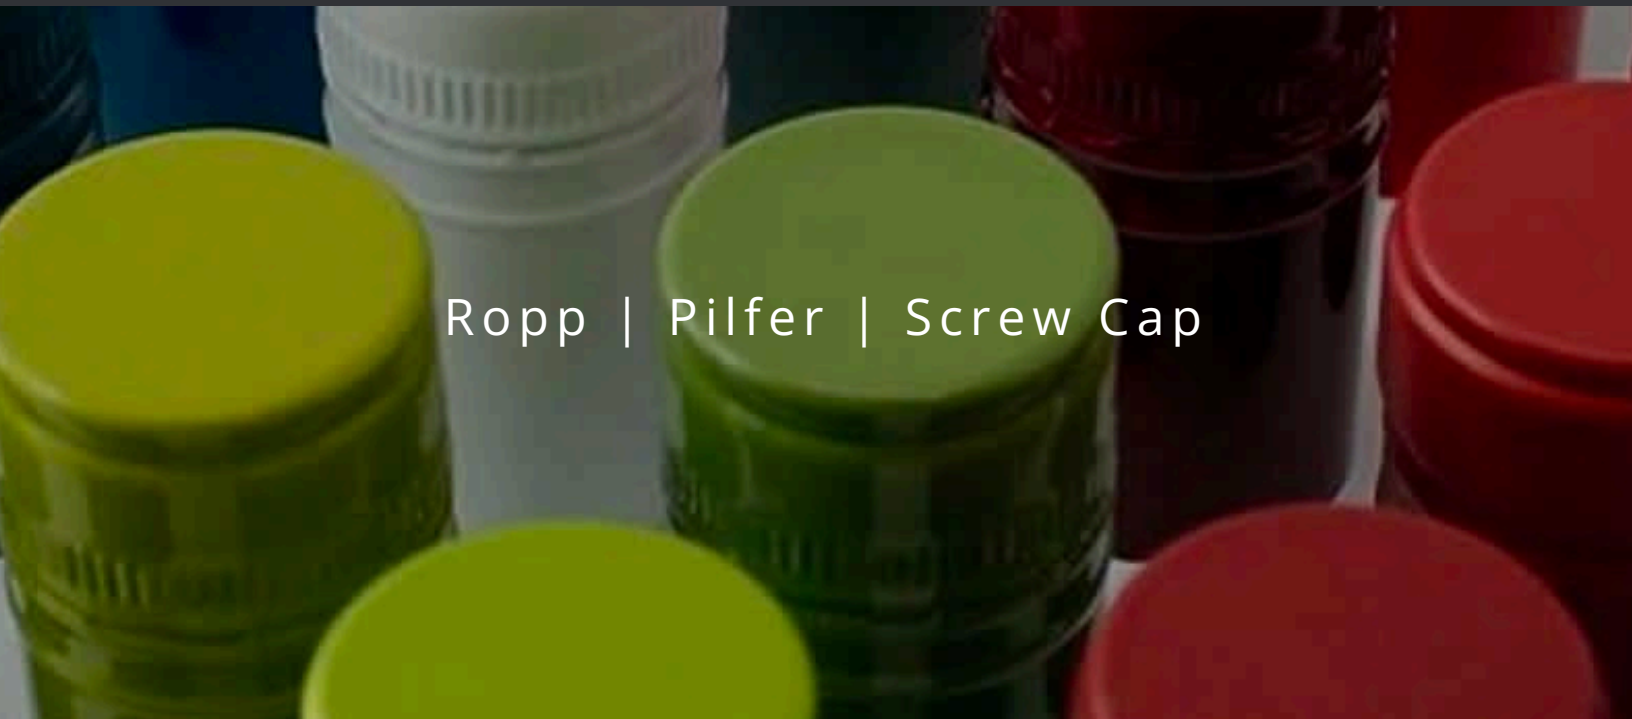

These are also referred to as sleeves, heat shrinks. Tamper evident caps. These can be made of different materials (PVC/PET/PLA) and are easy to apply by hand using a heat gun or automatically using a dispenser with a heat tunnel. These capsules are often the last detail of the bottle packaging but its key to include early in your decision making as there are several options to consider so as to facilitate its application, integrate label and maximise visibility by branding them.

MATERIAL TYPE

Commonly its PVC based but in recent years there has been a push for PET which has a less crystalline but has some recyclability elements. We have now launched a plant base material which is bio sourced and thus a step in the right direction ecologically. If you put a transparent version of these 3 capsules you will not easily see the difference.

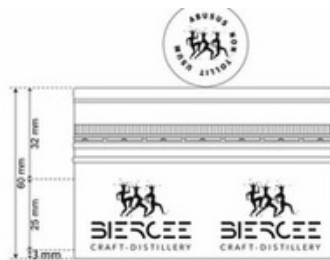

Ropp | Pilfer | Screw Cap

SIDE BRANDING

We have standard colours and sizes, and we can print on the capsule once produced using hot foil (MOQ 2K) or when making the capsule but MOQ (50)

TOP BRANDING

As well as hot-foiling (MOQ 2K) we have a unique solution of making your own embossing tool with your logo.

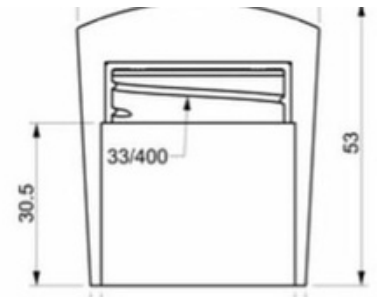

GPI (Screwcaps) are composed of outer shell, plastic insert, inside liner.
There are standard colours: Black, Silver, Gold but we can do bespoke colours and personalisation (top and side) as well as embossing and debossing -
Lead time: +/- 4/6 weeks

WOOD

We are seeing a growing demand for this GPI combination -

Wood head can be laser engraved.

STANDARD COLOURS

We have generic colours available :
Black , Silver, Wood, Bronze, Gold.

TAMPOGRAPHY

We can do branding on the head and the side of the GPI.

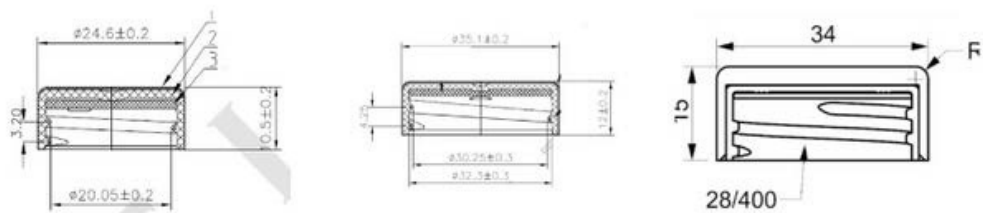

EMBOSS/DEBOSS

Embossing is possible on the top and side but tooling is required.

STANDARD SIZES

We work mainly with 28/400 and 33/400 sizes.

GIFT BOX

Give your clients a unique experience when receiving a unique bottle with a unique packaging. We work with several factories with long term established relation to match you every needs. Weather it's standard folded box that can be assembled with a cartoon insert, to a bespoke size/ anti-scratch quadri colour cartoon box with hotfoil print, with magnets and a super-premium foam insert.
